

D-WATERING BAG

Although pumping out water is a common and necessary construction activity, it can cause stormwater pollution if not done carefully. The **D-Watering Bag** is an effective device for separating sediment, silt, and debris from pumped water, making sure such contaminants never enter the storm drain system. The D-Watering bag attaches securely to the hose and is designed to accommodate a hose fitting up to 7" in diameter. Made from a nonwoven polypropylene geotextile that is both tear and UV resistant, you can count on this bag to get the job done.

BENEFITS

- UV resistant
- Tear and puncture resistant
- Made to fit around a variety of hoses
- Can be easily folded for easy transportation and storage
